

Data: More babies dying in 1st year

Figures correspond with rising child poverty rate

Eduardo Cuevas
USA TODAY

A teenager delivered a baby boy in fetal distress at 25 weeks gestation. Doctors tried to resuscitate the child – with ventilation, cardiac compressions, chest tubes and other methods – to no avail. The neonatologist later discovered the mother had a previously undiagnosed case of syphilis.

The baby's death at a Wisconsin hospital illustrates dangers babies face in their first year of life. It's also the type of scenario doctors are examining as they try to understand a grim new trend. For the first time in two decades, the number of U.S. infants who died in their first year of life is on the rise, according to provisional data from the National Center for Health Statistics, or NCHS.

"We don't live in a vacuum," Dr. Dennis Costakos, director of neonatal and perinatal medicine at the Mayo Clinic Health System in La Crosse, Wisconsin, said. "The health of the baby is often directly related to the health of the mother."

Experts consider infant mortality a key indicator of overall population health. The statistics reflect a jump in the death rate for one year, 2022; however, they raise concerns because the U.S. has failed in other key metrics: maternal mortality rate has increased and the average life expectancy is declining.

Increases 'add up to general trend'

The NCHS report marks the first statistically significant increase in infant deaths since 2002. Before this report,

the U.S. had seen a 22% decline in child deaths over 20 years, although the U.S. continually had higher infant death rates than other high-income countries. The change in 2022 data represents a notable moment for public health officials: an increase to 5.6 infant deaths per 1,000 live births, compared with 5.44 in 2021.

"All of these increases, even the small increases, they all just add up to a general trend," report author Danielle Ely, an NCHS health statistician, said.

The report used figures from the National Vital Statistics System of birth and death records across 50 states and the District of Columbia for children's first year of life. The provisional figures will be finalized in a report expected next spring. However, its authors decided to release the data early to provide a warning to health care providers.

The figures also correspond with the child poverty rate doubling in 2022. Another factor for providers to consider: expanded Medicaid coverage that was available during the COVID-19 pandemic has been cut.

Keeping parents and children in good health has to be a conscientious, proactive undertaking said Georgia Machell, interim president and CEO of the National WIC Association, a nonprofit that represents nutrition service provider agencies that implement the Special Supplemental Nutrition Program for the Women, Infants and Children program.

"There needs to be investment in the safeguards in order to support families to reduce infant mortality," Machell said.

What did researchers find?

The increase in 2022 infant deaths spanned several demographic groups,

with some demographic groups being spared.

The largest statistical uptick in infant deaths was among babies born to Native American and non-Hispanic white people between 2021 and 2022 – for Indigenous infants, from 7.46 to 9.06 per 1,000 births, and for white infants, from 4.36 to 4.52. The infant death rate among children born to Black people climbed from 10.55 to 10.86. Native Hawaiian and other Pacific Islander people also saw a small rise in infant deaths (from 7.76 to 8.5), as did Hispanic people (4.79 to 4.88), though deaths of infants born to Asian American women declined, from 3.69 to 3.5.

Additionally, there were rises in the death rates of babies born preterm – at less than 37 weeks gestation – as well as the rates of infants who died less than 28 days after birth, and those who died 28 days or more into their first year. There were small increases in death rates of babies born to people ages 24 and younger and babies born to people ages 30-39. And there was a significant jump in deaths of babies born to people ages 25-29.

Among the 10 leading causes of death for babies, maternal complications and bacterial sepsis saw increases in mortalities, the report said.

These states saw biggest rise in infant mortality rates

The deaths were far higher in some regions of the country: Georgia, Iowa, Missouri and Texas saw significant increases in infant mortality rates.

Several of these states moved to restrict abortion access since the U.S. Supreme Court outlawed the constitutional right to abortion in June 2022, though experts warned it may be too soon to

gauger any correlation between restricted access to reproductive healthcare and infant mortality.

"Anytime we see it trending in the wrong direction, our alarm bells are going off," Dr. Alison Gemmill, an assistant professor at Johns Hopkins University's Bloomberg School of Public Health and a demographer, said.

Gemmill has forthcoming research suggesting there was a rise in infant and neonatal mortality in Texas after lawmakers in 2021 enacted Senate Bill 8, a law banning abortion once a fetal heartbeat is detected, usually around six weeks of pregnancy.

Among high-income countries, the U.S. spends far more on health care, yet it has the highest infant and maternal death rate, a recent study from the Commonwealth Fund found. In the U.S., maternal mortality rates have jumped in recent years, particularly among Black and Native people. Black people had death rates nearly three as high as non-Hispanic white people.

The latest figures are alarming for Dr. Ayman El-Mohandes, dean of the City University of New York's Graduate School of Public Health and Health Policy, but he said it is more alarming that the U.S. has been unable to significantly reduce its mortality rate below what it was in 2000, when 6.89 out of 1,000 births resulted in a baby dying in its first year. Since 2000, infant deaths in the U.S. declined by one per 1,000 births.

"The American infant mortality rate of 5.6 per 1,000 births is about three times as high as Norway's, which El-Mohandes said is notable.

"We need to know who we are comparing ourselves to," El-Mohandes said, "and what infant mortality can look like."

Gerald I. Read

PRATTSBURGH - Gerald I. Read passed away on November 2, 2023.

Born July 6, 1930 to Irwin and Mildred (Moore) Read, Gerald grew up in rural Gorham, NY. He graduated from Gorham HS as valedictorian in 1948 and from Cornell University in 1952. While serving as a US Army meat inspector during the Korean War, Gerry married his first wife, Martha Wolfanger, in 1953. After teaching agriculture in Georgetown, NY for five years, Gerry and family moved to Prattsburgh, NY, where he taught agriculture and vocational classes, served as advisor to the FFA Club, drove school bus and coached various JV sports for over 30 years. In his "spare" time, he held various state teacher association offices, played adult softball and was a member of the Prattsburgh Volunteer Fire Department, American Legion and Masons. Gerry married his second wife, Shirley (Cromwell) Barnum in 1976. After both retired from Prattsburgh Central School, they traveled the world and spent time with their 14 grandchildren and 15 great-grandchildren.

Gerry was pre-deceased by both wives (Martha 2007 and Shirley 2023), his brother David Read, sister-in-law Patricia Read and brothers-in-law John Keene and Morgan Knapp. He is survived by his brother Paul (Christine) Read, sister Avis Knapp, his children Darlene Mahnke (John Or-baker), Donna (Joel) Fiske, Darryl (Donna) Read, Douglas Read, Calvin (Theresa) Barnum, Cindi (Jerry) Noeth, the above mentioned grand and great-grandchildren and numerous nieces and nephews.

A funeral mass will be held November 18th 11:00am at St Michael's Church in Penn Yan, NY, with a Celebration of Life immediately following at the Prattsburgh Fire Hall, Prattsburgh, NY. Burial will be at the convenience of the family. In lieu of flowers, please consider a donation to the Gerald and Shirley Barnum Read Scholarship Fund, c/o Prattsburgh Central School, 1 Academy St, Prattsburgh, NY 14873. Memories of Gerry may be shared with his family and friends at townsendwoodzinger.com

John Souhala

FORT WORTH - John Souhala (Khamssavanh Souhala) passed away on Monday, August 14TH 2023 at the age of 62 in Fort Worth, Texas, and his Funeral Service took place on Monday, August 21ST 2023 at the Forest Ridge Funeral Home Memorial Park Chapel in North Richland Hills, Texas.

John Souhala was born on January 2ND, 1961 in Savannakhet, Laos. His mother was Khammoune Moune Souhala, and his father was Bush Pe Souhala. John Souhala migrated to the United States to Rochester, NY in 1981 to join his wife, Lily Souryavong (Malaithong Souhala) who gave birth to Jodi Souhala in 1983, and Jimmy Souhala in 1989.

John Souhala was employed at McAlpin Industries in Rochester, New York for over 30 years. John Souhala moved to Fort Worth, Texas in 2011, and worked at Souhala Lamination Press. John Souhala was a hard working individual who placed family first over anything else, and dedicated most of his time to his family.

John Souhala was preceded in death by his Father, his Mother, his Aunt, and his 1ST Cousin. John Souhala is survived by his Sons Jimmy Souhala, Jodi Souhala, his Brothers Thone Souhala, Mone Souhala, Sith Souhala, as well as his Sisters Phanh Souhala, and Sone Souhala.
